

Global Supply Chain Automation Solutions

Connects disparate, legacy logistics and trade compliance IT systems

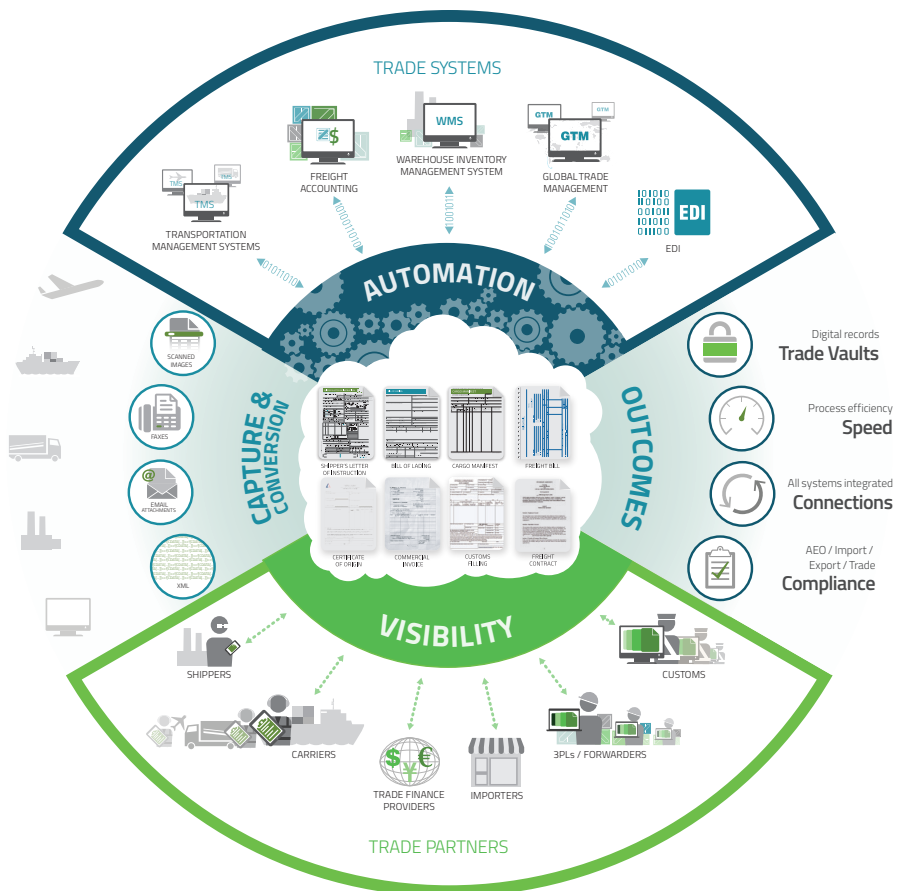

Provides you with fully automated process control, efficiency and governance of critical logistics processes

Supports compliance with trade customs clearance, trade regulations, AEO certification VAT/excise tax processes and import/export recordkeeping

Delivers end-to-end control, automation and visibility across all layers of your global supply chains

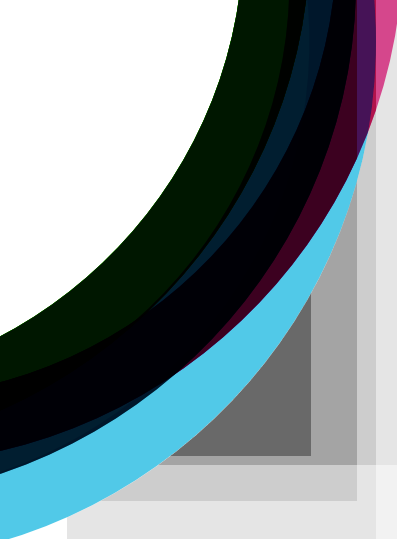

With OnBase enterprise content management (ECM), you can instantly capture, identify and digitize transportation and trade documents in any form. Its unlimited, configurable workflows and inherent integration capabilities allow you to easily connect and automate data transfer between all trade management and transportation systems.

As a result, OnBase helps you create greater efficiency and reduce costs for critical trade processes such as freight payment and billing, freight contract management, and customs clearance activities. OnBase also helps simplify import/export compliance with secure, document retention and records management features that can be easily altered to meet evolving customs and trade regulations.

One platform **Unlimited potential**

Our Commitment to Global Trade

OnBase Global Trade solutions are continually improved to conform to the latest digital standards, electronic record conventions and compliant dematerialization processes. We accomplish this through active committee participation within the World Customs Organization Data Model team, United Nations CEFACT, International Association of Ports and Harbors, and the Supply Chain and Logistics Group of the Middle East.

Logistics Operations Solution

Freight Payment and Audit

Automate pre-payment audits of vendor freight invoices for accuracy against freight contract terms.

Customer Freight Billing

Automate the accurate billing of freight charges with proof of delivery capture, automated invoicing and customer statement generation.

Freight Contract Management

Convert rate tables into electronic freight contract documents with automatic distribution, versioning, change notices and approval records.

Supply Chain Automation and Connectivity Solutions

Trade Vault Folders

For each shipment, you can gather all supporting documents, logistics data, compliance submissions and related correspondence into one digital folder securely accessible to every level of your trade compliance and supply chains, both internal and external. Electronically transfer documents and data to customs agencies, ports, shippers and logistics service providers.

Trade Systems Automation Connector

Connect and automate your disparate transportation and trade IT systems, from TMS, WMS, GTM, customs single windows to smart port community systems – both internal and external.

Advanced Trade Document Capture

Automatically capture documents, digitize them and extract key data elements for electronic transfer into legacy TMS/WMS/GTM/port/customs systems.

Trade Compliance Solutions

Electronic Record Keeping

Securely store and manage global compliance records with full audit trails.

Import/Export Clearance and Compliance Customer

Process controls to increase customs clearance efficiency and support AEO trusted trader programs.
